One trusted partner - several solutions.

Built to suit the needs of today's drilling operations, the MTU Electric Drilling Packages (EDP) deliver high performance, efficiency and reliability from one trusted partner. The self-contained package integrates diesel engine, generator, radiator and other MTU components seamlessly.

Electric Drilling Package (EDP) for 50Hz
- Configuration: 12V 4000 G23
- Rated Power: 1420 kW

Electric Drilling Package (EDP) for 60Hz
- Configuration: 12V 4000 G73
- Rated Power: 1105 kW

Oil & Gas
Electric Drilling Package Series

100% PLUG & PLAY

New Electric Drilling Package

MTU’s New Electric Drilling Package is an all-in-one solution, including genset and radiator, developed to answer all the needs of a drilling operation, whatever the conditions.

**Greater flexibility for operators**
The New EDP offers great flexibility to drilling operators: wherever you plan to use your equipment in future - the New EDP is ready for it. Cold start capability down to 14 °F / -10 °C (without preheating) and going up to 131 °F / 55 °C ambient allows operation from harsh winter to scorching summer. Thanks to its compact dimensions, the New EDP also fits perfectly into a 40-foot open-top high cube container.

**Ruggedness and improved safety**
All system components are built for maximum durability and designed to withstand the extreme environmental conditions at oil and gas wells all around the world. At the same time, reduced heat and noise emissions – thanks to the radiator – mean improved operational safety and less strain on personnel.

**Economical power and high performance**
The New EDP is powered by an MTU 12V 4000 engine capable of continuous output at 2912 bhp (1,500 kW) and 1800 rpm. Featuring industry-leading technology and a proven common rail injection system, the engine delivers outstanding fuel economy and full performance up to 13,000 ft (4,000 m).\(^1\)

**Quality and service**
All components are engineered to meet the highest quality standards and designed for easy serviceability. Everything comes from one trusted source and is designed to work together, which promotes maintenance and overhaul intervals. Expert support is available worldwide through MTU’s global network.

**New Electric Drilling Package – The flexible all-in-one solution.**

---

**New Electric Drilling Package**

- **Great flexibility**
  - Easy system handling due to compact profile and rugged base frame
  - Modularity for remote or standard package

- **Improved health & safety conditions**
  - Reduced noise and heat stress levels for personnel

---

**Series 4000 Tier 4 diesel engine**

- **Cost effective**
  - No additives needed for emissions control
  - Lower lifecycle costs

- **Maximum performance and durability**
  - Full performance available up to 13,000 ft (4,000 m)\(^2\)
  - Optimized power-to-weight ratio
  - Rugged, reliable design

- **Proven technology**
  - Fourth-generation common rail injection system with excellent transient behavior
  - New generation of the successful Series 4000 engine

---

**New Electric Drilling Package**

- **Configuration:** 12V 4000 T25L
- **Rated Power:** 1500 kW
